MSc Finance Analytics graduate who has built AI pipelines that turn raw business data into structured performance reports, reducing manual reporting from hours to minutes. Experienced translating messy datasets into clear insight that senior leaders actually act on, with hands-on exposure to Python, Microsoft Copilot, and enterprise AI adoption. Confident working with people at all levels, from department heads to Managing Directors, and resilient under competing deadlines. Seeking a genuine entry-level AI role with real responsibility from day one.

EDUCATION

Kings College London, London, UK

Sep 2025 – Sep 2026

MSc Finance Analytics – Coursework in corporate finance, financial reporting, statistical modelling, econometrics **Jai**

Hind College, Mumbai, India

March 2022 – March 2025

Bachelor of Commerce – 8.7/10

AI AND DATA EXPERIENCE

Agentic AI Workflow Automation

June 2026 – Present

- Built automated AI pipelines using Python, n8n, and LangGraph that transform raw business data into structured performance reports, reducing manual reporting time from hours to minutes
- Applied prompt engineering and LLM tool-calling patterns to solve practical business problems, proactively identifying new ways to use AI responsibly and effectively across analytical workflows
- Explored Microsoft Copilot integration for business reporting workflows, testing how AI tools can improve productivity and commercial performance across routine analytical tasks
- Completed the DeepLearning.AI Agentic AI Certificate covering multi-agent systems, automated tool use, and evaluation frameworks, then immediately applied the concepts to build working production pipelines

Quantum Data Analytics Simulation (Forage) – Retail Sector

August 2026

- Transformed 264,000+ rows of messy retail performance data into clear, actionable insight by conducting customer segmentation, brand affinity analysis, and experimentation design in R and Python
- Built a client-ready report translating complex analysis into recommendations that a non-technical senior manager could act on immediately, directly improving commercial decision-making
- Identified a measurable uplift in trial store performance by designing a control-store methodology using statistical confidence intervals

BUSINESS PERFORMANCE AND STAKEHOLDER EXPERIENCE

Practera Finance Micro Internship, London, UK

June 2026 – July 2026

Student Consultant (Research Lead)

- Acted as central point of contact for a senior Managing Director and 8-person team, building relationships across all levels and learning to influence decisions through clear, evidence-based insight
- Turned a messy, unstructured \$77B+ dataset into a clear summary of capital flows, proactively identifying a critical strategic issue that redirected the entire team's approach
- Presented performance data and recommendations directly to senior leadership, translating complex financial analysis into insight that people actually acted on
- Managed four concurrent workstreams across a 5-week project with no extensions, delivering every report and presentation on deadline while adapting the analytical approach mid-project after discovering the original strategy was flawed

King's Investment Fund (Team Leader)

March 2026 – June 2026

- Coordinated performance reporting across an 8-member investment team by building Excel dashboards that tracked portfolio productivity, commercial returns, and risk metrics across multiple data sources
- Presented business reports and strategy documents to faculty advisors, communicating data-driven insight clearly to senior stakeholders with no technical background
- Maintained action logs and project trackers to drive follow-ups between meetings, ensuring 100% on-time delivery across all reporting deadlines

OPERATIONAL AND TECHNICAL EXPERIENCE

DG Software, Mumbai, India (Internship)

March 2025 – August 2025

- Solved practical data problems across a large organisation by investigating and resolving BAU operational issues, reducing data discrepancies by 30% through systematic process improvement
- Built BI reporting dashboards used by senior managers for operational decision-making, turning raw business data into performance insight accessible to non-technical audiences
- Assessed new business requirements from department heads and embedded improved processes into daily operations, improving data retrieval efficiency by 25%

- Created standardised process documentation that enabled two new team members to operate the improved systems independently within their first week, ensuring continuity beyond the internship

SKILLS

- **AI & Analytics** – AI Pipelines | Microsoft Copilot | Prompt Engineering | LLMs | Multi-Agent Systems | Python | R | SQL | Data Visualisation | BI Reporting
- **Business Tools** – Excel (Advanced: modelling, PivotTables, lookups) | PowerPoint | Word | Microsoft Office 365 | Bloomberg Terminal
- **Professional** – Translating Messy Data into Clear Insight | Stakeholder Communication Across All Levels | Influencing Decisions Through Evidence | Performance Reporting | Commercial Awareness

ADDITIONAL

Available immediately. Comfortable with hybrid working and commuting to Home Counties head office.
